Ecommerce A/B test on personalized recommendation

Made by Iris Xia

Overall and Channel-level Performance Comparison

Result Summary: Overall uplift across all channels, led by strong gains in **Social (+30%)** and **Ads (+25%)**, while **SEO** remained stable. Improvement was mainly driven by higher **conversion & purchase frequency**, not basket size.

Design: Group A: test group with a personalized product recommendation, Group B: Control Group with a static best-sellers list | Method: Two-sample Z-test (Conversion)

Ecommerce cohort and category analysis

User retention, category performance, and product association insights

Made by Iris Xia

Result Summary: Early-adopter cohorts (Feb–Apr) sustained the highest retention through **M2–M4**; the May cohort is weaker, however, suggesting lower acquisition quality or a lighter campaign. Revenue is led by **Home and Sports** with **Sports concentrated in a few best sellers** while Home didn't.
